

## AMT/5.300 Triaxial MEMS DC Response Accelerometer

±5g range, 300mV/g sensitivity

The AMT range of accelerometers are Triaxial MEMS (micro electro mechanical system) DC response voltage output devices for testing at low frequency vibration measurement from DC (0Hz) and above. They are Triaxial (measuring in 3 directions simultaneously) variable capacitance design and are available with a 2m integral cable fitted with a 7pin connector to suit the DJB DCM-03 MEMS signal conditioning unit or alternatively as bare wires.

Ideally suited to low frequency vibration applications including low level vibration where high sensitivity is required.

Due to their ability to measure DC response they can also be used to measure constant gravity application.

The AMT/5.300 has a range of ±5g and a sensitivity of 300mV/g, we recommend using with DJB's MEMS signal conditioner the DCM-03

### Features:

- Operational frequency range DC to 200Hz
- Integral cable with 7 pin connector or pigtails.
- DJB signal conditioner model DCM-03 available as an option
- Differential Capacitance operation
- Compact form and low mass
- Constant gravity measurement

### Applications:

- Auto/Aero structural body surveys
- Constant gravity measurements
- General vibration measurement
- Seismic vibration measurement
- Crash testing
